

CAPABILITY — ACTIVE & RESPONSE

Live-Trip Monitoring & Emergency Response

The advance does not end when the brief is written. During travel, ARGUS keeps watch on the trip and stands ready for the moments that matter most.

The active trip

- › **Live status per stop** — where the principal is, what is next, and the posture at each location.
- › **Active alerts** — surfaced against the trip as conditions change.
- › **Team check-ins and live feed** — a shared, current picture for everyone on the detail.
- › **Next-leg staging** — the route to the next stop, confirmed and ready.

Continuous monitoring

Across the trip, ARGUS can watch for weather, incidents, threat changes, route changes, seismic events, and protest activity — so a change in conditions becomes an alert, not a surprise.

Route-forward travel — the direction ARGUS is built toward

ARGUS is designed to treat your current position as the start and assess the route ahead to your destination, leg by leg, as you move — by ground, air, or sea. The value is the road in front of the principal, updated on the move.

Emergency response

One tap opens a **Trauma**, **Active-Threat**, or **Medical** response with pre-built A / B / C plans and the nearest trauma center and EMS context already on hand. ARGUS supports the team's decision — it does not replace professional responders. In any emergency, call 911.

After-action debrief

When the trip closes, ARGUS produces an after-action record: each stop's outcome, a trip summary, and a sign-off — with the team's field verification attributed and attached.

Informational use only. Analysis is machine-generated from publicly available and open-source information and must be verified before operational use. ARGUS is not a substitute for licensed security, legal, or medical professionals, or for emergency services — in any emergency, call 911.
