

The advance, done before you land

90% of the advance, done before your team arrives.

ARGUS assesses every stop of a trip — threat, routes, nearest trauma care, and the venue itself — and answers your team’s questions in plain language, right on the phone. So operators focus on the principal, not the paperwork.

WHAT IT DELIVERS

Threat & situational intel	Movement & routes
Hot zones, protests, crime trends — each source-cited.	Primary, alternate, emergency extraction, and avoid.
Site & venue + posture	Venue-type checklist
Access, egress, fire systems, plus UL752/ASTM-rated Physical-Security Posture.	USSS Universal Matrix — the right checklist for each venue type.
Medical & emergency	Validation & evidence
Nearest trauma, EMS/police/fire times, response plans.	Outside-expert section sign-off + a secure file library (blueprints, floorplans, PDFs).
Live intelligence feeds	Planning workflow
Federal, open-source, law-enforcement, social, news.	Drop in an itinerary → a full trip built in minutes, and it stays built. An interrupted build resumes in one tap.
Plain-language assistant	Phone-first + desktop
Ask anything about the trip; grounded answers.	The whole advance in the operator’s pocket.

Built so your data stays protected. Least-privilege, credential-gated access. Records encrypted, identifying details minimized. Sensitive keys never on the device. Completed advances are retained and recallable, with an attributed activity trail. We don’t publish how it’s built — by design.
